MTU Bridge Components

Emotional design meets engineering proficiency.

designed by

pininfarina

A breath of fresh air in the yachting business – MTU now maintains a cooperation with the Italian designer Pininfarina. The new design line concentrates on four bridge components: A control lever for clutch- and engine speed control which is shaped like an engine rod. A tableau panel for engine control, a high resolution touch display for monitoring of the propulsion plant as well as analog instruments for engine speed, pressure and temperature.

All components can be integrated in our current automation product line “BlueVision_Basic | NewGeneration”. Additionally, MTU cooperates with experienced partners to guarantee premium quality.

Your benefits are:

- Premium supplier with designer co-branding Pininfarina
- Unique design in the market
- Clear design line for bridge components
- Especially designed with a focus on yacht applications

„Passion for new technologies is the driver for great design.“

For the new design of MTU's yacht bridge components, we applied our unique design vision and iconic line to reflect the engine's power and performance fascination in every detail. Our goal was to transport MTU's culture, mission and values as a top-class engine manufacturer.

The control lever, inspired by the conrod of a powerful MTU yacht engine, is the design

focus. Displays, operating consoles and instruments speak the same design language, resulting in a uniform, elegant look yacht owners will appreciate.

Paolo Pininfarina, Chairman of Pininfarina S.p.A.
